

# Special Operations Tactical Tourniquet System

## Special Operations Tactical Tourniquet System

### Product Description

The Special Operations Tactical Tourniquet System was designed to provide the operator with a quick and efficient access to their tourniquet.

The pull away design allows the operator easy access to the tourniquet when mounted to via MOLLE or belt loops. When pulled the Tourniquet drops and is held in place for immediate access to provide lifesaving support in a trauma related scenario.

This system is available to be purchased as a individual kit or as part of our IFAK system (RG-IFAK-TTS-001).

### Product Specifications
